The AS1500-EP antenna sstand is specifically designed for measurements at a fixed height. An enclosed DC motor, controlled via a fibre optic cable, is used during polarisation. Other fixed antenna heights are available upon request.

The AS1500-EP antenna stand, when operated with the <u>CO3000</u> Controller, operates similar to the standard antenna mast MA4000 (without height adjustment).

The GPIB (IEEE 488) bus, when operated with the CO2000 Controller, or GPIB (IEEE 488) & LAN (TCP/IP), when operated by CO3000 Controller provides an additional control option for all functions.
